**iJET International Launches Worldcue® COMMUNICATOR Module to Enhance Security Communications between Organizations and Their People**

*Global risk management leaders introduce two-way communications to help clients better support and quickly confirm the well-being of their personnel in emergent and crisis situations*

**ANNAPOLIS, MD (February 28, 2018)** — iJET International, the recognized thought leaders in intelligence-driven risk management, announced today the launch of Worldcue® COMMUNICATOR, the newest addition to its Worldcue platform. Worldcue COMMUNICATOR enables two-way communications from iJET's Worldcue® COMPANION application, providing organizations the ability to immediately initiate a communication with their people who could be affected by a security issue or incident worldwide.

iJET's next-generation two-way communications capability, Worldcue COMMUNICATOR allows a customizable message to be quickly and easily sent from Worldcue COMPANION via one or more channels such as SMS, email or in-app push to the impacted person's Worldcue MOBILE app. Recipients can reply to confirm their safety or signal their need for assistance. All responses are monitored in real-time on the Worldcue COMPANION dashboard, and messages can be automatically re-sent to individuals who do not respond to the initial message.

"iJET is committed to continually developing and innovating new solutions to help our clients keep not only their travelers safe but all of their people," said Bruce McIndoe, president of iJET International. "Because issues and incidents can arise at any time in any location, organizations both need and want to be proactive about keeping their people informed and safe. Worldcue® COMMUNICATOR allows for two-way communication alongside the unparalleled intelligence and timeliness of our threat alerts to do just that."

iJET's Worldcue® COMPANION provides critical access to operational intelligence, offering real-time insight into threat exposure by providing organizations with a visual dashboard depicting the locations of their people around the world and what evolving issues or events could impact them. iJET's Worldcue® MOBILE app delivers actionable information and support to an organization's people, giving them access to vital intelligence as well as a contact point for emergencies near their home office or while away on travel.
